BARCO B-10

The B-10 is a completely mobile outdoor LED display solution that can play back concerts, live video, sports events or virtually any kind of image you can imagine. You can use it during a cycling tour during daytime and roll it to a concert that same evening ... The screen can turn around 360 degrees, allowing you to adjust the display to face your audience, whatever the setting. The B-10 is completely self-contained so no external power supply is needed. The B-10 can be ready to operate in 15 minutes.

Discover how the B-10's large-screen video adds to the excitement of the event. Catch all the action at sporting events or concerts and replay the highlights, or put advertising and promotion for upcoming activities onto the screen, so that your audience never misses an event.

Have large screen LED video and graphics anywhere you want!

BARCO B-10
