standard technology

blocks ambient light for a bright and large image

PARALLAX

PROJECTA
REFLECTING YOUR VISION

Too much light in a room for quality projection? Now there's a solution - Parallax

Parallax is a projection technology that features an advanced optical lens system that rejects light, rather than only diffusing light. Parallax is made up of multiple micro-layers to achieve its light blocking properties and superior viewing angles. Each micro-layer has a function in creating the brightly lit display. Layers that are black boost contrast and absorb ambient light from the sides, while a specially shaped layer blocks light from above. Two ambient light rejecting surfaces are available in a fixed frame; Parallax 0.8 for standard throw projectors and Parallax UST 0.45 for ultra short-throw projectors. Both products are flexible, shipping in a roll, and feature speckle and glare-free surfaces.

Parallax 0.8

Maximum width: 347 cm
Maximum height: 150 cm

16:10 16:9 2.35:1

Gain: 0.8

Viewing Angle: 170°

Vertical viewing angle: 34°

- Designed for long-throw projection
- Position projector within vertical viewing angle
- Ships unassembled and easy to install

Parallax UST 0.45

Maximum width: 265 cm
Maximum height: 150 cm

16:10 16:9

Gain: 0.45

Viewing Angle: 160°

- Designed for ultra short-throw projection
- Position the projector underneath the projection screen
- Ships unassembled and easy to install
